funkwerk FC4

DECT™ industrial handset

Funkwerk presents a new generation of terminals with the handset family funkwerk FC4. We attached great importance to significant presentation of led telephone traffic activities and of fast reaction possibilities.

Incoming calls as well as entries in call list, redial call list and connection list will be automatically combined with name entries and presented. Indication of missed calls and messages.

The user has constantly a clear overview of the actual status of the apparatus. Important functions such as call-back, entrance in the phonebook or redial call list are accessible through a shortcut.

The high-definition, illuminated colour display, the new designed symbol-based LCD window and the also illuminated keypad with coloured menu buttons cater for an easy and pleasant handling of FC4.

Handsets of the FC4 series are most ergonomic. The contemporary battery technology with the most modern Power Management and the manifold possibilities of configuration for handling and signalling provide it. That means: Additional safety for handling and information.
